THE APP**

06

CONCLUSION

PROBLEM:

Schools still use too much paper, there is not enough clear information about what practices are sustainable, and many students and teachers don't know where to start. We want a greener school, but we often lack tools that guide or motivate us

01

INTRODUCTION

GreenUp!

The app is divided into three parts:
one will contain the books and notes
for each subject, to reduce paper use;
another will be a map showing
sustainable locations (recycling bins,
water fountains); and the third will
allow you to ask questions or get
ideas about recycling—this last part
will be similar to Alexa, Siri...

02 DIGITALITATION BOOKS AND NOTES

The second section allows users to upload books, notes and documents to use them in digital format. This reduces paper usage, makes it easier to access materials from any device, and helps teachers share resources more efficiently.

03

SUSTAINABILITY MAP OF THE SCHOOL

The third section shows what the school is already doing sustainability:
Solar panels, green areas, recycling points, water-saving systems, etc.
This helps highlight the school's efforts and motivates everyone to keep improving.

04

SUSTAINABILITY AI ASSISTANT

An artificial intelligence assistant that analyses the school's needs and gives personalized advices, such as:

- How to reduce energy consumption
- How to improve recycling
- How to optimize materials
- And simple habits that students and teachers can apply

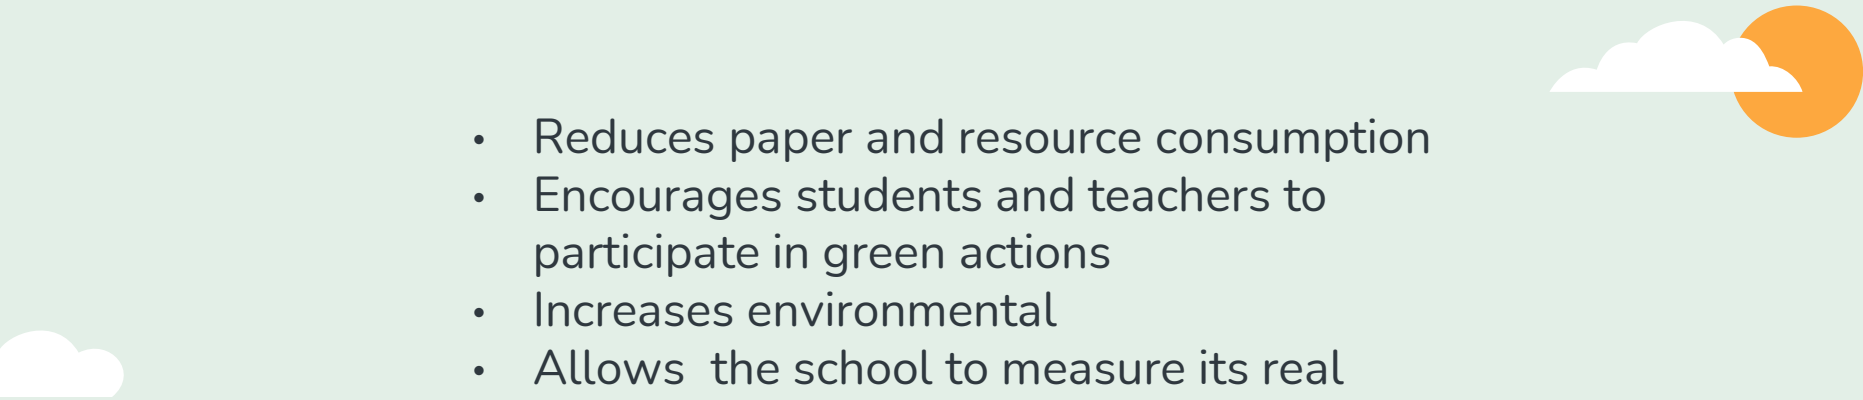

It works as a quick and personalised sustainability guide.

05

BENEFITS OF THE APP

- 
- Reduces paper and resource consumption
 - Encourages students and teachers to participate in green actions
 - Increases environmental
 - Allows the school to measure its real impact
 - Promotes a more responsible and modern school culture

06

CONCLUSION

GreenUp! is a practical, educational and accessible tool that helps any school move towards a more sustainable future. We believe that small digital actions can create a big positive change
