Conclusion

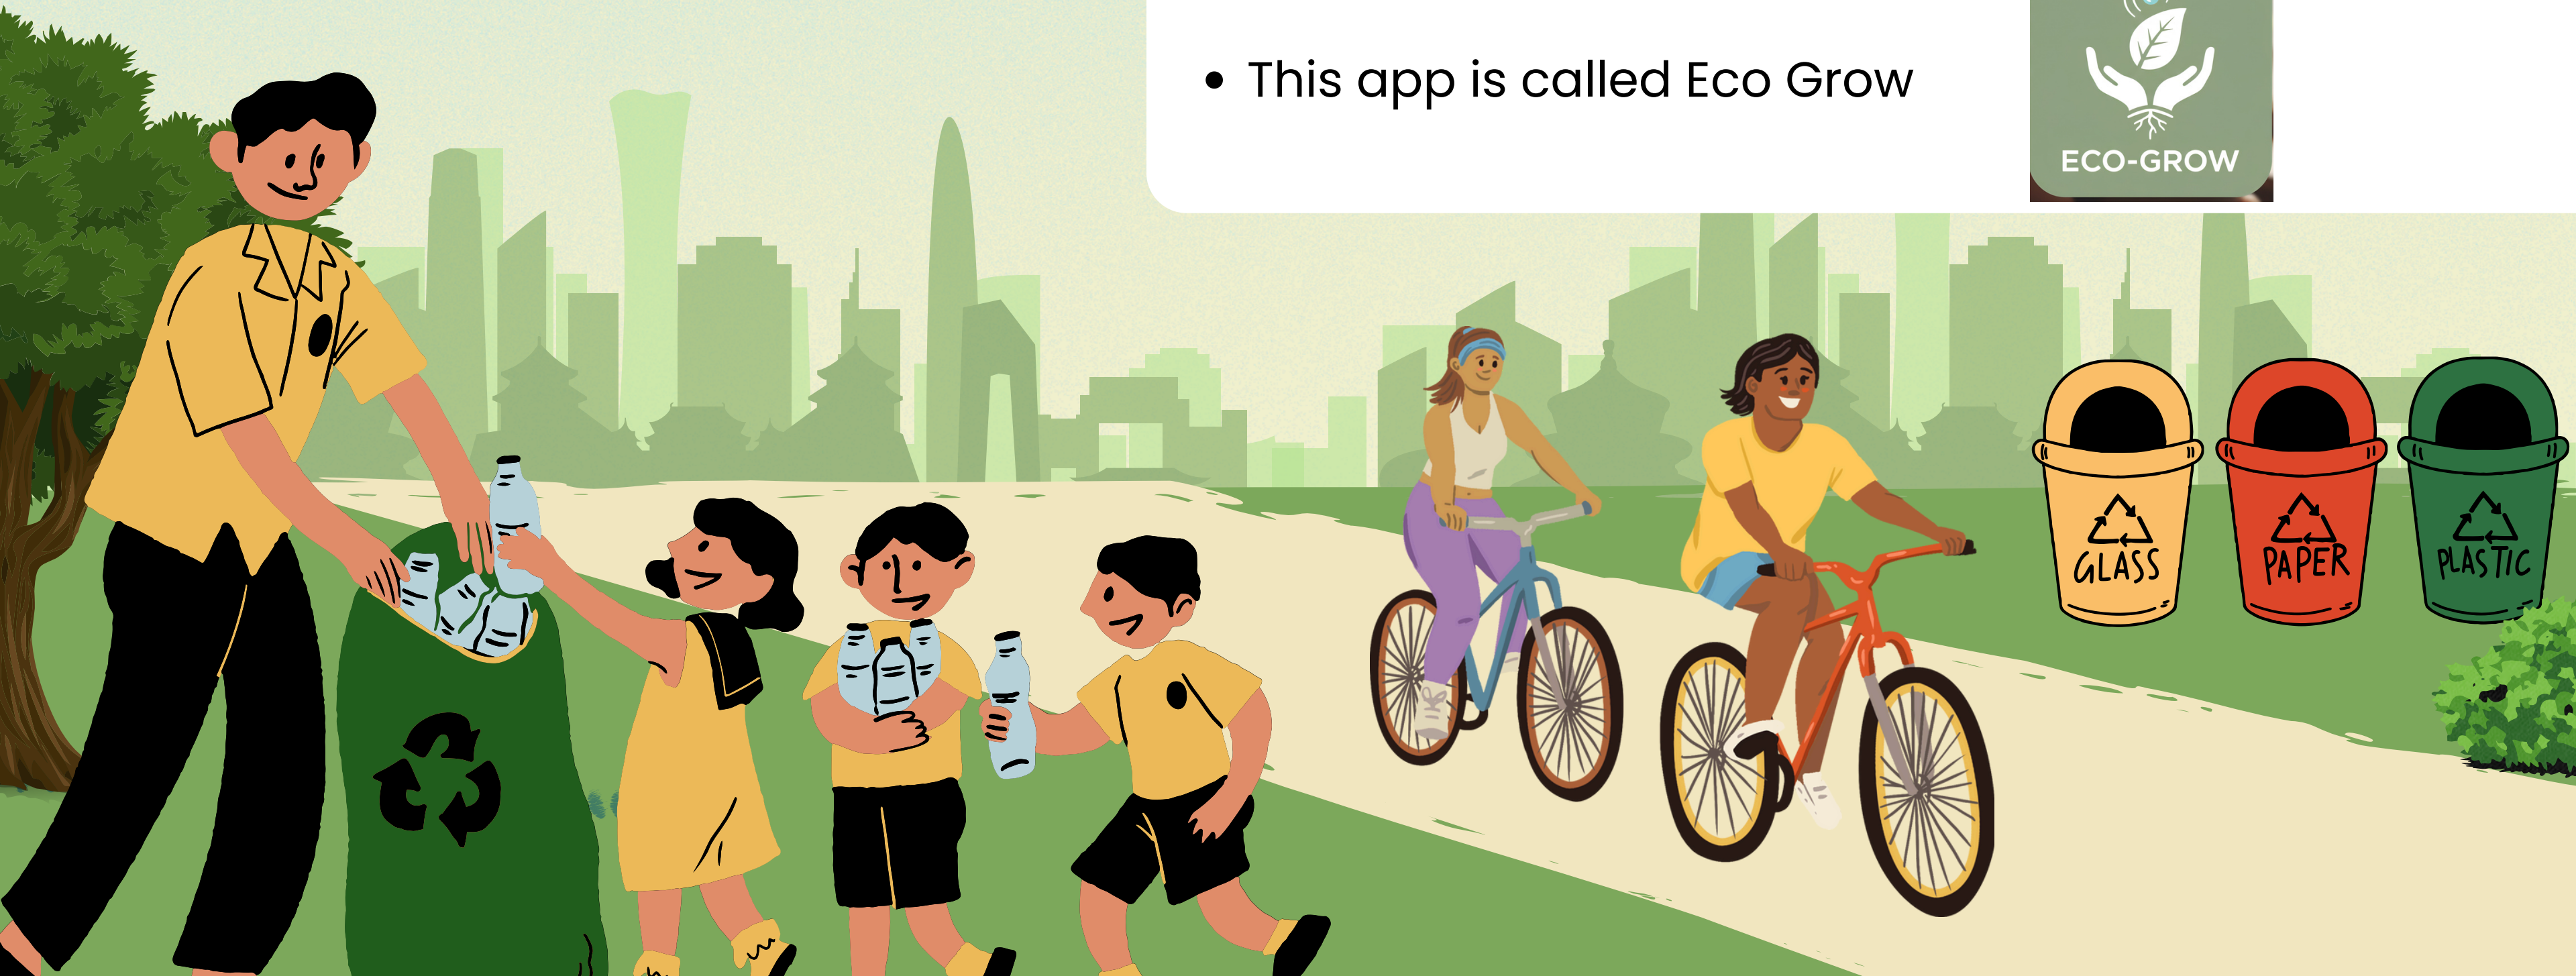

INTRODUCTION

Sustainable communities are formed by several people, and they try to support everyone through social actions that result in an improvement in the environment and in coexistence.

OUR IDEA

- Our idea is based on an AI-powered app designed to promote a sustainable community based on local products.
- This app is called Eco Grow

ECO GROW

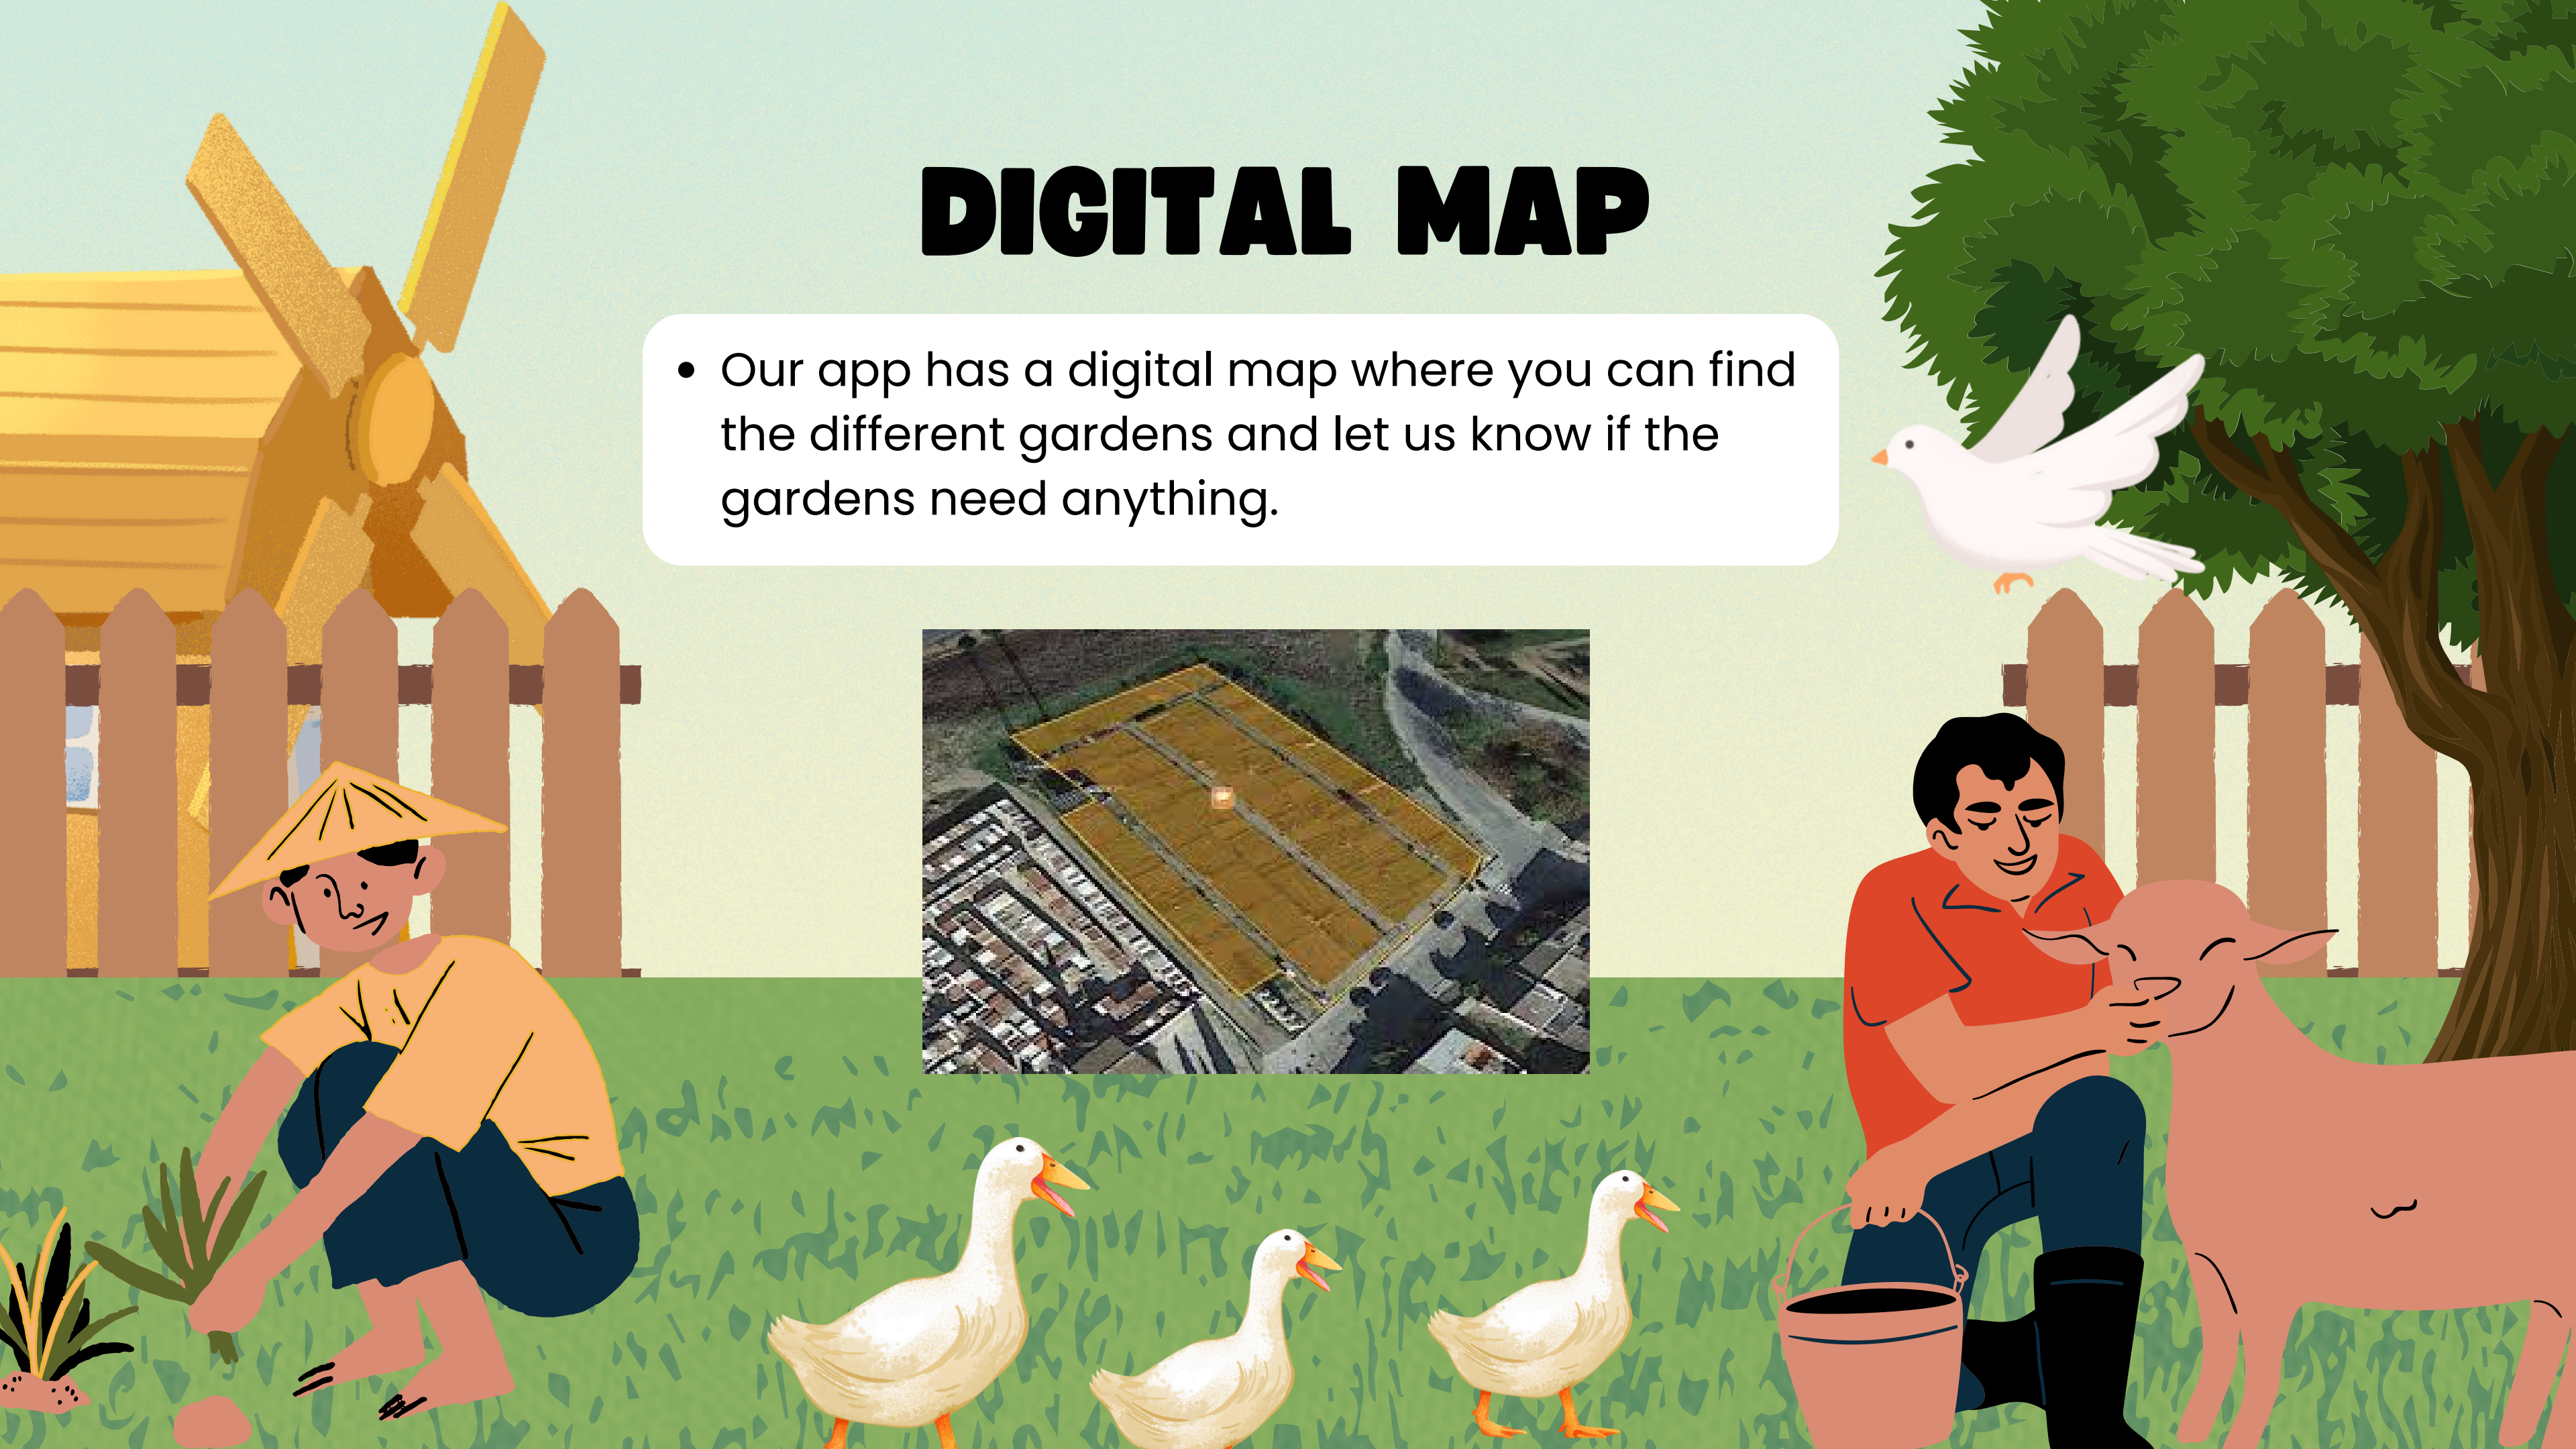

Our App is focused on:

- Eco Grow is an AI-powered app that uses sensors to measure the needs of our public gardens.
- If these sensors indicate any need, they send a notification to the population so that someone can go and meet those needs.
- Those who meet these requirements will earn points that can be redeemed for discounts at local stores to purchase produce from the garden.
- The more points, the greater the discount.

DIGITAL MAP

- Our app has a digital map where you can find the different gardens and let us know if the gardens need anything.

ADVANTAGES

**Motivation to
maintain a
sustainable
community**

**Promotes the
consumption of
local products**

**Efficient use of
resources
thanks to AI,
avoiding waste**

DISADVANTAGES

High Startup costs

**Dependence on
citizens**

**Damage and theft
of sensors**

CONCLUSION

Working with the nature can make you happy and the people around you even more happier

**“WE GROW FOOD
WE GROW COMMUNITY
WE GROW THE FUTURE”**

THANK YOU
